

Centralized Inverters for Emergency Lighting

Illuminator Series E & IE

THE ILLUMINATOR SERIES E & IE

Myers Emergency Power Systems (EPS) has a long history of engineering and manufacturing the highest quality and most reliable backup power solutions in the industry. Myers EPS centralized inverters provide emergency power to lighting, illuminating the path to egress during critical outages.

Illuminator Series E

The Illuminator Series E is an uninterruptible lighting inverter. It transfers to inverter mode (battery power) when utility power is interrupted for less than 2ms. The line interactive design eliminates excessive transfers to battery power. The Series E is designed for all lighting loads including LED. Fluorescent, Incandescent, Quartz, and HID.

Illuminator Series IE

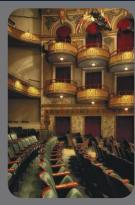

The Illuminator Series IE is an interruptible lighting inverter. It transfers to inverter mode (battery power) when utility power is interrupted for more than one line cycle. This series is capable of supporting full normally off loads. The Series IE is designed for Fluorescent, Quartz, LED and Incandescent normally on and/or normally off lighting loads and applications that require large normally off (emergency only) lighting loads.
